PREFACE

The work described in this publication was sponsored by the United States Army Intelligence Center and School. The writing and publication of this paper was supported by the Jet Propulsion Laboratory, California Institute of Technology, under a contract with the National Aeronautics and Space Administration, NAS 7-918, RE 182, A187.

INTRODUCTION

This contract is for the development of test configurations and supporting software to facilitate the collection and analysis of specific ELINT signal parameters. The fixed price research and development contract is being performed by Electronic Systems under JPL Contract No. 957176, Modification No.1.

Mr. James Gillis and Dr. Lonnie Wilson met on 8 August 1985 to initiate and coordinate the details of contract No. 957176, Modification No. 1. This early meeting satisfies the preliminary oral briefing requirement by Electronic Systems. The interim report was submitted and reviewed on September 20, 1985. This final report is submitted on September 27, 1985. The Statement of Work section of this report is a direct reproduction of Article 1, revised Statement of Work of the modified contract. In addition to the collection and analysis included in the SOW, Electronic Systems agreed to perform third and fourth central moment calculations and 25 through 75 interpercentile range calculations.

The following tasks have been completed and analysis results are being reported in the report:

1. The single pulse ELINT Parameter Measurement Processor has been assembled.
2. Data collection software has been written and debugged.
3. Frequency, pulselwidth and PRI sampled data have been collected on two radars.
4. Data processing and analysis software has been updated for all statistical and histogram analysis.
5. Statistical and histogram analysis have been performed on frequency, pulselwidth, and PRI sampled data.

**SUPPLEMENTAL AGREEMENT
 STATEMENT OF WORK**

CONTRACT NO.	MODIFICATION NO.	TASK ORDER NO.	PAGE NO.	NO. OF PAGES
957176	1	RE182/A187	1	3
TO: (CONTRACTOR'S NAME AND ADDRESS)	ISSUED BY			
ELECTRONIC SYSTEMS 22560 Murietta Road Salinas, CA 93908	JET PROPULSION LABORATORY CALIFORNIA INSTITUTE OF TECHNOLOGY 4800 OAK GROVE DRIVE PASADENA, CALIFORNIA 91109			

THE ABOVE NUMBERED CONTRACT IS MODIFIED AS FOLLOWS.

1. ARTICLE 1, STATEMENT OF WORK, is revised as follows:
(a) Add paragraph (a)(3) as follows:

- (3) Perform the following additional tasks on two (2) radar systems:
- (A) Develop and test data collection software for ELINT data (frequency and pulselength parameters) with the Instantaneous Frequency Measurement (IFM) sensor.
 - (B) Perform data collection and signal processing analysis using the IFM sensor for frequency and pulselength parameters.
 - (C) Perform statistical analysis of the sampled data collected with the IFM sensor. Sampled data plots, histograms, and statistical analysis will be performed for each of the two (2) radar systems.
 - (D) Upon completion of the tasks described in paragraphs (a)(3)(A) through (a)(3)(C) on one radar system, the decision to perform the tasks on the second system will be based on the interim test results from the first system.

(b) Add paragraphs (b)(4) and (b)(5) as follows:

- (4) Provide oral and written preliminary and interim reports describing the proposed method of analysis and the analysis used on each radar system.
- (5) Provide an overall final oral and written report analyzing the overall results from this additional work.

EXCEPT AS HEREBY MODIFIED, ALL TERMS AND CONDITIONS OF SAID CONTRACT AS HERETOFORE MODIFIED REMAIN UNCHANGED AND IN FULL FORCE AND EFFECT.

CONTRACT NO.	MODIFICATION NO.	TASK ORDER NO.	PAGE NO.	NO. OF PAGES
957176	1	RE182/A187	2	3

(c) Delete paragraph (c)(1) and substitute:

- (1) Three (3) copies of an interim written report describing the results of the work performed under paragraphs (a)(2) and (a)(3).

(d) Add paragraph (d)(6) as follows:

- (6) Decide whether or not to proceed with performing the tasks on the second radar system within five (5) working days after receipt of the interim results from the first radar system.

2. ARTICLE 2, DELIVERY OR PERFORMANCE SCHEDULE, is revised as follows:

(a) Delete paragraphs (c)(1) and (c)(6) and substitute:

- (1) Collect and analyze ELINT signal parametrics as specified in paragraph (a)(2) and perform the additional tasks described in paragraph (a)(3) Date of Contract through September 30, 1985.

- (6) Final written report summarizing all work as specified in paragraph (c)(2) Delivered.

(b) Add paragraphs (c)(7) and (c)(8) as follows:

- (7) Interim written report describing the results of the additional tasks as specified in paragraph (b)(4) August 30, 1985

- (8) Final written report describing the results of the additional tasks as specified in paragraph (b)(5) September 30, 1985

ELINT PARAMETER MEASUREMENT PROCESSOR

IFM (Instantaneous Frequency Measurement) and RF Electronic Counter sensors were employed to measure, collect, and analyze ELINT signal parameters associated with an AN/PPS-6 radar and the Hood radar. These actual ELINT or Electronic Support Measures (ESM) sensors with an accompanying RF to IF downconverter have been employed by several platforms to measure precision frequency and precision PRI parameters.

The complete ELINT sensor system employed for data collection and analysis under this modified contract is shown in figure 1. The RF/IF downconverter converts the RF input signal to an IF signal at approximately 410 MHz. The wideband downconverter was specifically designed not to color the signal waveform.

The IFM and HP 5345A Electronic Counter sensors were used to collect and measure the ELINT parameters. The data collection, statistical data processing, and histogram software programs were written on the HP-85 microcomputer. Floppy discs are used to store data sets and results are plotted using the HP-7470A plotter.

The software programs developed for this analysis are:

1. GETVAL Program - This program is used to collect data with the RF Electronic Counter sensor.
2. TPLOT Program - The data samples are plotted as a function of time.
3. HPLOT Program - The data collected using GETVAL program can be analyzed in histogram form with this program.

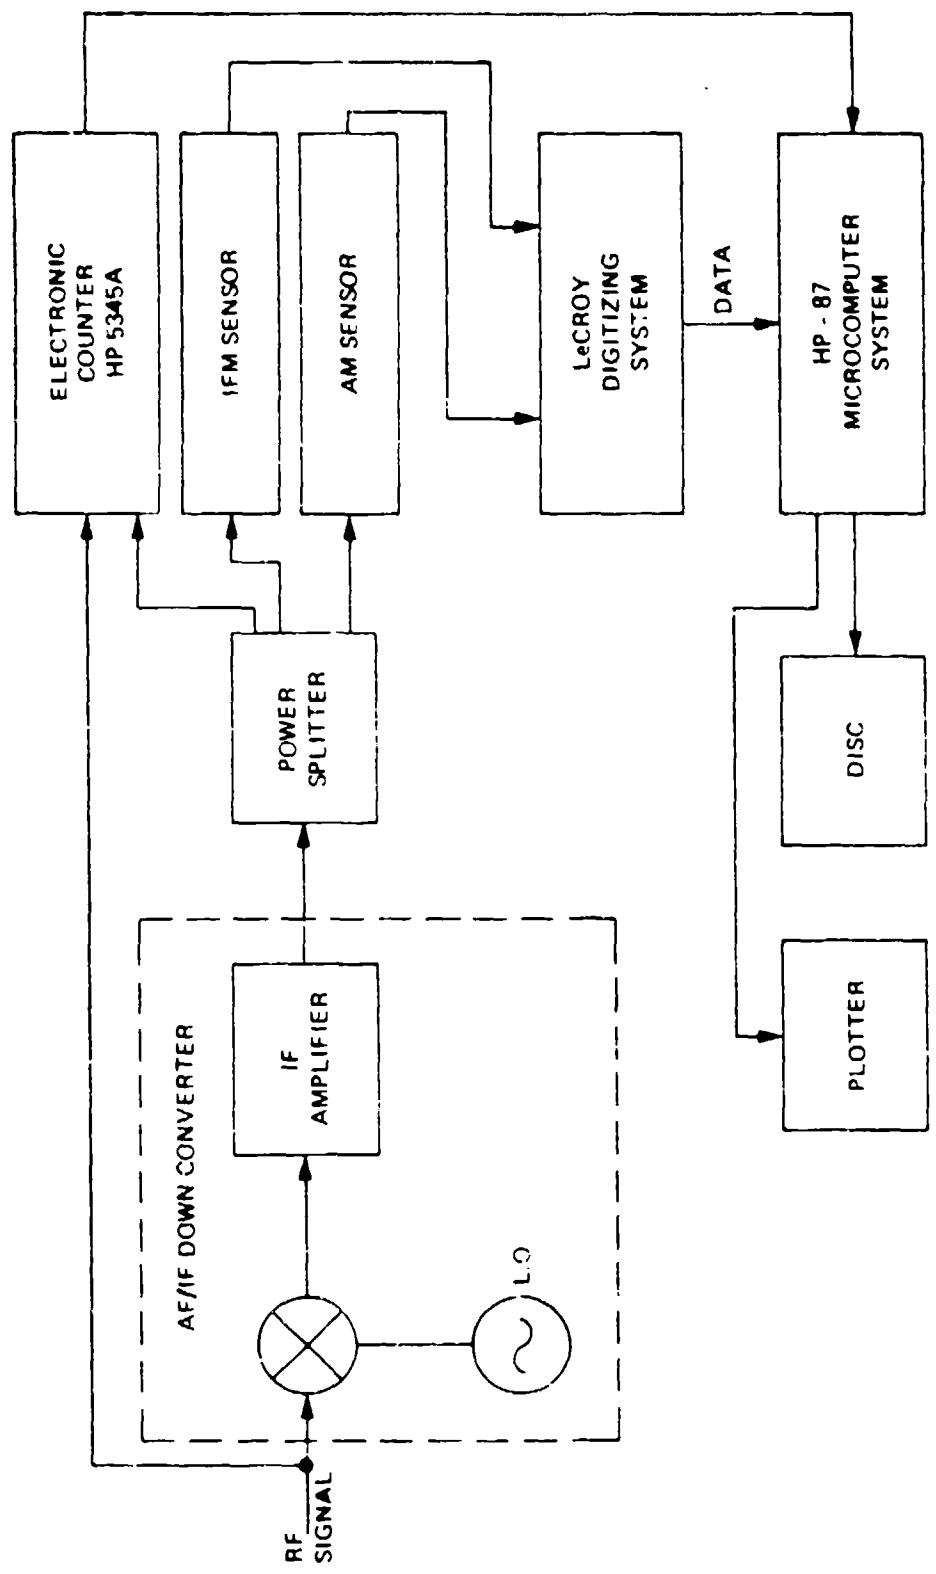

Figure 1. Modified ELINT Parameter Processor Using IFM Sensor and MW Electronic Counter

4. DATAS Program - This program is used to compute the statistical parameters associated with the data.

5. PRINTP Program - This program prints the statistical parameters derived from the DATAS Program.

6. HISTP Program - This program plots the theoretically expected histogram and the measured data histogram on one plot.

7. HCROY and other Programs - These programs allow data collection with the IFM sensor and LeCroy Digitizing System and data transfer to the HP-87 computer system for analysis.

Computer programs 1 through 6 were developed under the original contract, while program 7 was developed under the modified contract. The HCROY program is listed in Appendix A of this report.

ANALYSIS ALGORITHMS

The analysis algorithms used in this modified contract are identical to the algorithms used in the original contract. These algorithms will not be repeated again.

TEST RESULTS

1. HOOD Radar

a. Single Pulse Frequency

Two sets of single pulse frequency sampled data were collected and analyzed for the HOOD radar. The IFM sensor was employed to make these measurements.

Table 1 contains the summary statistical results for this analysis and Appendix B contains a more detailed analysis of the single pulse frequency sampled data.

b. Single Pulse Pulsewidth

Four sets of single pulse pulsewidth sampled data were collected and analyzed for the HOOD radar. The Microwave Counter sensor was employed to make these measurements.

Table 2 contains the summary statistical results for this analysis and Appendix C contains a more detailed analysis of the single pulse pulsewidth sampled data.

c. Single Pulse PRI

Four sets of single pulse (more accurately defined as one pulse to the next pulse) PRI sampled data were collected and analyzed for the HOOD radar. The Microwave Counter sensor was employed to make these measurements.

Table 3 contains the summary statistical results for this analysis and Appendix D contains a more detailed analysis of the single pulse PRI sampled data.

d. Average Frequency

Four sets of average frequency sampled data were collected and analyzed for the HOOD radar. The Microwave Counter sensor was employed to make these measurements. Approximately 300 pulses were averaged into one sampled data point.

Table 4 contains the summary statistical results for this analysis and Appendix E contains a more detailed analysis of the average frequency sampled data.

e. Average Pulsewidth

Four sets of average pulsewidth sampled data were collected and analyzed for the HOOD radar. The Microwave Counter sensor was employed to make these measurements. Approximately 300 pulses were averaged into one sampled data point.

Table 5 contains the summary statistical results for this analysis and Appendix F contains a more detailed analysis of the average pulsewidth sampled data.

2. PPS-6 RADAR

a. Single Pulse Frequency

Two sets of single pulse frequency sampled data were collected and analyzed for the PPS-6 Radar. The IPM sensor was employed to make these measurements.

Table 6 contains the summary statistical results for this analysis and Appendix G contains a more detailed analysis of the single pulse frequency sampled data.

b. Single Pulse Pulselwidth

Four sets of single pulse pulselwidth sampled data were collected and analyzed for the PPS-6 radar. The Microwave Counter sensor was employed to make these measurements.

Table 7 contains the summary statistical results for this analysis and Appendix H contains a more detailed analysis of the single pulse pulselwidth sampled data.

CONCLUSIONS

The following tasks have been completed during this development effort:

1. Data collection software for the IFM ELINT sensor has been completed. Part of the data collection software program is included in Appendix A.
2. Statistical analysis software has been revised and updated.
3. Single pulse frequency, single pulse pulsewidth, single pulse PRI, average frequency and average pulsewidth sampled data have been collected for the HOOD radar using the IFM sensor and the Microwave Counter sensor.
4. Frequency and pulsewidth sampled data have been collected for the AN/PPS-6 radar using the IFM sensor and the Microwave Counter sensor.
5. Statistical analysis of all sampled data have been completed. Summary statistical results are presented in the test results section of this report. Detailed statistical analysis results are presented in Appendix B, C, D, E, F, G, and H of this report.

APPENDIX C

INTRODUCTION

ELINT parameter test results are contained in this appendix for the single pulse pulselwidth parameter associated with the HOOD radar. These measurements were performed with the Microwave Counter sensor in the single pulse measurement mode of operation. The single pulse pulselwidth data sets are labelled:

P4SPWA

P4SPWB

P4SPWC

P4SPWD

Single Pulse Pulsewidth Sampled Data - P4SPWA

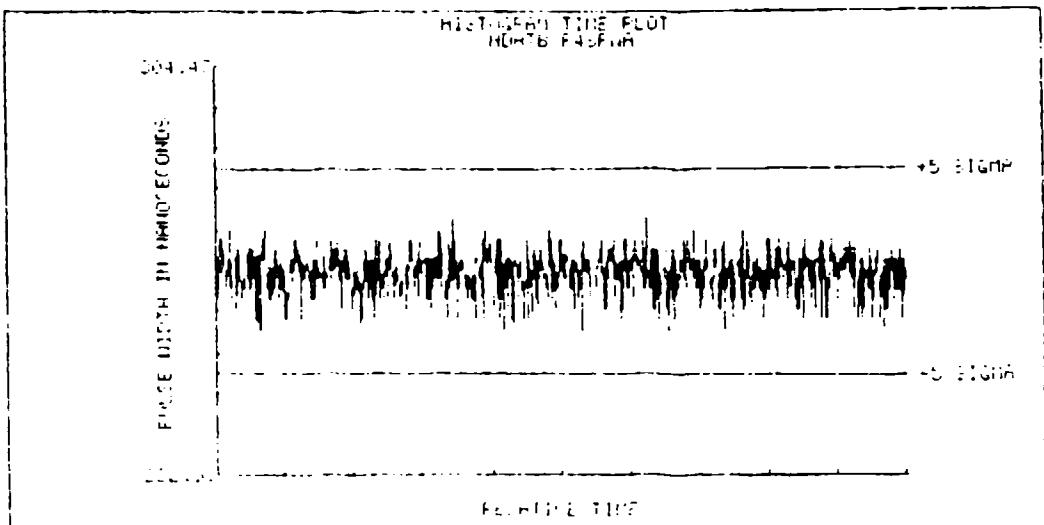

The statistical results of the single pulse pulsewidth sampled data P4SPWA are presented on the next three pages. Histogram time plots, histograms, and statistical analysis are presented.

The test results section of this report contains summary statistical information associated with this pulsewidth data set.

APPENDIX H

INTRODUCTION

ELINT parameter test results are contained in this appendix for the single pulse pulselwidth parameter associated with the PPS-6 radar. These measurements were performed with the Microwave Counter sensor in the single pulse measurement mode of operation. The single pulse frequency data sets are labelled :

P1SPWA

P1SPWB

P1SPWC

P1SPWD

Single Pulse Pulsewidth Sampled Data - P1SPWA

The statistical results of the single pulse pulsewidth samplec data P1SPWA are presented on the next three pages. Histogram time plots, histograms, and statistical analysis are presented.

The test results section of this report contains summary statistical information associated with this pulsewidth data set.
